

Current Status of SMOKA

@Subaru Users Meeting
2010-01-14

FURUSHO, Reiko
(Astronomy Data Center, NAOJ)

What is SMOKA?

SMOKA (Subaru-Mitaka-Okayama-Kiso-Archive)
is science archive system providing public data

- 8.2m Subaru Telescope (Hawaii)
- 188 cm telescope (OAO)
- 105 cm Schmidt telescope (Kiso Obs.)
- 50 cm telescopes (Akeno Obs. & OAO)
- Observed data after proprietary period become open.
- SMOKA provides several ways of data search.
- Data request and downloading with FTP, DDS4 are available after registration.

Status

	Frames	(GB)	Occupation	
Subaru	1,420,000	15,450	18 months	1999 ~
Okayama	150,000	819	2 years	1991 ~
Kiso	130,000	1,073	1 year	1993 ~
MITSuME	1,090,000	2,152	1 year	2007 ~

SMOKA Science Archive

SMOKA ver 3.2

ver 3.2 : The server operating SMOKA is replaced. Replacement has mostly been completed though there still remains imperfect parts. (Jun.17, 2008)

SMOKA provides public science data obtained at Subaru Telescope, 188cm telescope at Okayama Astrophysical Observatory, and 105cm Schmidt telescope at Kiso Observatory (University of Tokyo). It is intended mainly for astronomical researchers.

SMOKA has been developed and maintained by Astronomical Data Archives Center (ADAC), Astronomy Data Center (ADC), National Astronomical Observatory of Japan (NAOJ).

Resources

[SMOKA Web Index](#)

[SMOKA Overview](#) and [How To Search and Request Data](#)

[Online Help](#)
How to use SMOKA for a detail, and descriptions of reduction method.

[User Registration](#)
You need to register if you wish to retrieve FITS data.

Data Search

[Simple Search](#) : search data from a list of object names

[Advanced Search](#) : search data from various search constraints

[SUP Search](#) : search Suprime-Cam (SUP) Data (raw data, astrometric calibrated data and reduced data)

Remarks

2008/06/02
We found total SUP 299 frames being unexpectedly replaced. Of which, 162 frames are changed in data padding, note however that original data paddings did not follow the FITS convention. For the rest of 137 frames, values of data in 1 or 2 pixels are changed. For both cases, FITS header is kept unchanged. Now we have already fixed them. We recommend that you should retrieve data if

Development Status of SMOKA

Current version is **3.2**

- **Replacement of Computers**

Processing capacity considerably improved

- **Data Request System via e-mail (DRM)**

Since Sep.29, 2008

- **Data release of new instrument**

ISLE & KOOLS (Okayama Astrophysical Observatory)

- **Development of new search modes**

- Overlapped area search

- Solar system small body search

coming soon ...

- **Providing Data of New Instrument**

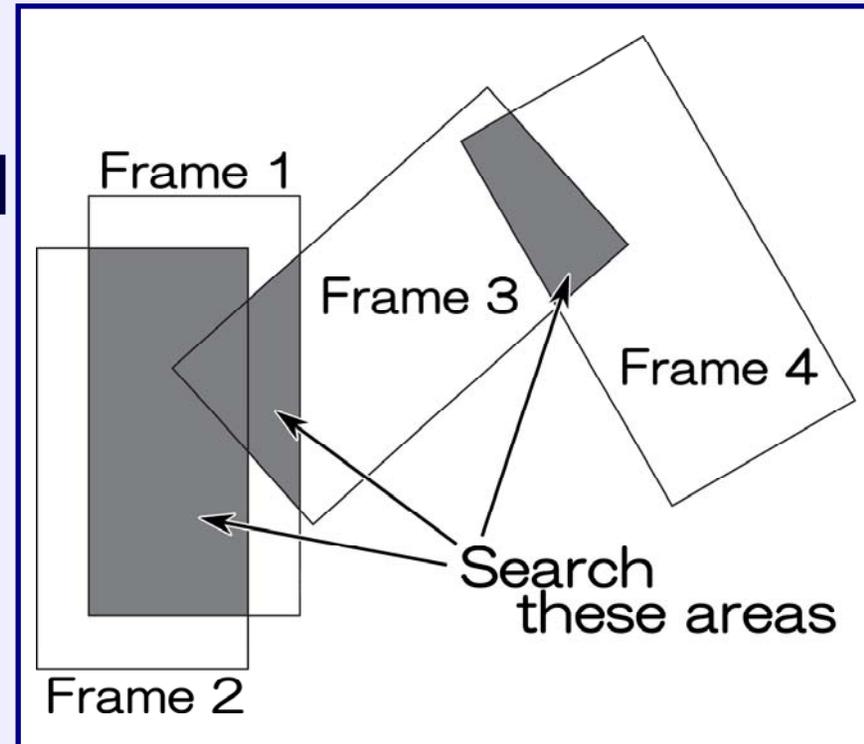

HOWPol (KANATA telescope, Higashi-Hiroshima)

- **Replacement of data transfer system**

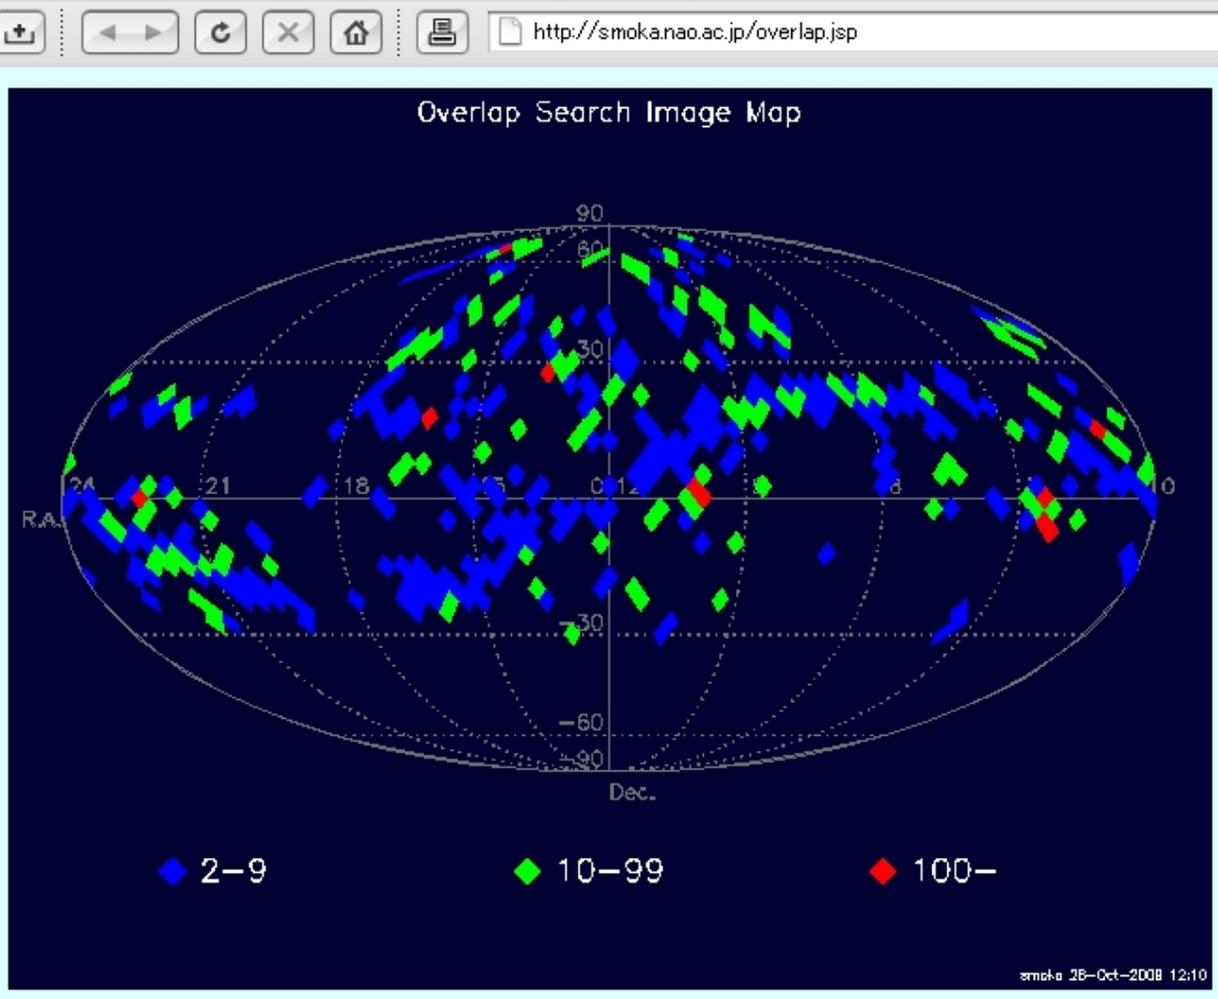

Overlapped area search

(coming soon)

- **Searching multiple observed area**
 - Solar system bodies survey
 - Variable objects search (SNe, variable stars, etc.)
 - Query for deep observed region
 - **Indexing area (1-arcmin at smallest) over the sky by using HEALPix* method**
 - *) <http://healpix.jpl.nasa.gov/>
- **Search the area of which indices in the frames are the same.**

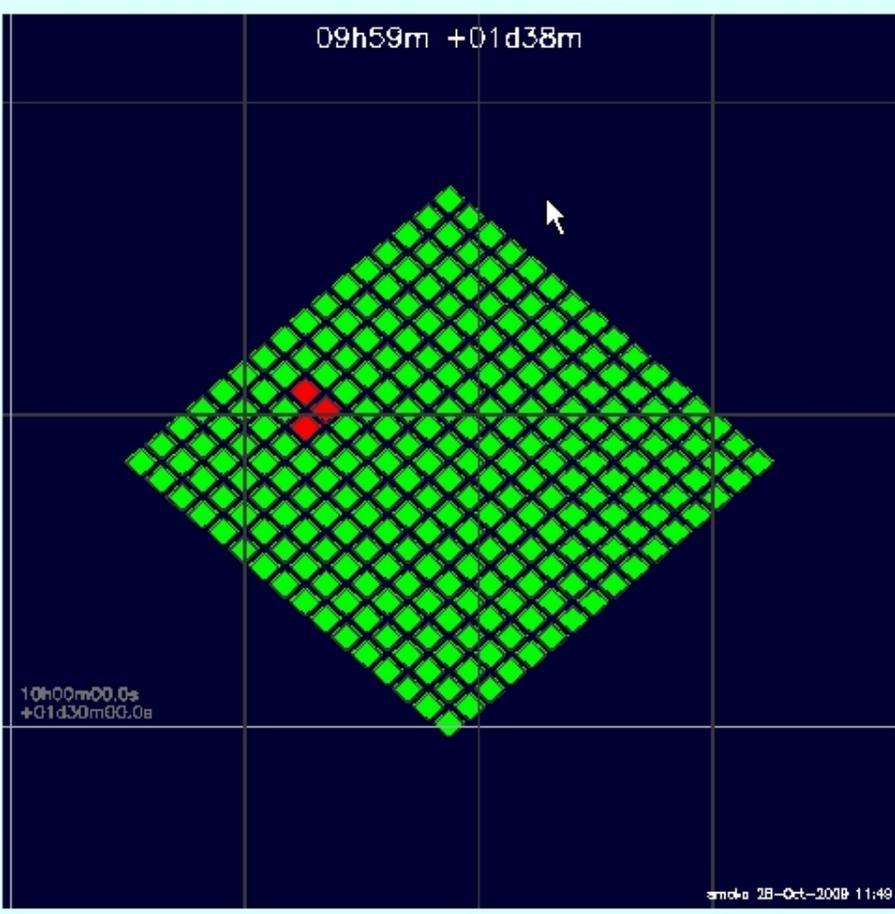

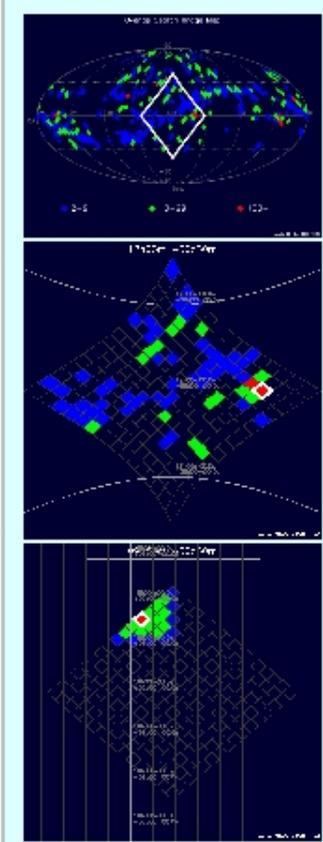

Snap-shot of User Interface (example)

Solar System Small body Search

(under development)

- **Searching** (discovered) **Solar System small bodies from archived frames**. Two modes for search:
 - Search frames in which the object was observed (left figure),
 - Search object names which were observed in archived frames (right figure).
- **By using HEALPix indices (for 1-arcsec)**

Usage of SMOKA (Users & Data Request)

<http://smoka.nao.ac.jp/about/drstat.jsp>

- Number of Users
 - **229** (2009/04/01 - 2010/01/08)
- Data Request per Month
 - 5000~40000 frames
 - 100~600 GB
- Subaru/Suprime-Cam Data is most requested
